

THE WORLD OVER

PIG BURIED IN STRAW PILE

BYSTRUS, O.—A 360-pound pig, missing since the Christmas season early in October at the J.C. Cornman farm near here, was found by its owner buried beneath a straw stack. Still alive, it weighed 60 pounds.

BYSTON SETS NEW SPEED RATE

BONNEVILLE SALT FLATS—In two screaming bursts of speed, Capt. Geo. Eyston of England broke the world land speed mark for the measured mile salt track when he drove his racing monster "Thunderbolt" over the distance at an average speed of 114.42 miles an hour.

A. J. BURNAP TO CONTEST LETHBRIDGE BY-ELECTION

LETHBRIDGE—The Social Credit Advisory Committee, headed by Premier Aberhart, Friday night chose A. J. Burnap, a railway engineer, as the party's candidate in the December 2 provincial by-election.

OTTAWA CUES RELIEF GRANT

Reduction of \$5,000 a month in the Federal government's contribution to Alberta as grant in aid for unemployment relief was made this week by the Dominion government. Up to the present time \$130,000 has been paid monthly, but in future this will be reduced to \$125,000.

ALBERTA LIQUOR PROFITS OVER TWO MILLION DOLLARS

With Edmonton leading all points in the province in volume of business done, total sales of the Alberta Liquor Control Board for the fiscal year ended on March 31 last, totalled \$7,680,708.78, according to accounts released last week by Hon. Solon E. Low, Provincial Treasurer.

Of the total, liquor sales amounted to \$5,697,707.56 and beer sales to \$3,703,000.83.

After deducting cost of products and operating expenses a profit of \$2,165,652.07 was shown on the year's operation.

ANCIENT IRRIGATION

Irrigation in Arizona is over one thousand years old. In both the Salt and Gila River valleys the ancient systems built by the Hohokam and Salado Indians, the ancient Pueblo tribes once irrigated their lands. The ancient canals and systems still can be traced in many parts of the state, and such the engineering skill of these ancient peoples.

TRAVEL BY BUS—LOWER FARES

Only Four More Weeks Until Christmas!

COME IN AND SEE OUR STOCK OF MEN'S SHIRTS, PYJAMAS, NECKWEAR, GARTER SETS, SUSPENDERS, ETC.

OUR PRICES ARE RIGHT AND THE QUALITY WILL SURPRISE YOU

THE FARMER'S EXCHANGE

Were there any washouts along the road after the cloudburst? Oh, yes, my sister was parked in a car with one, and I was parked with another.

A Hen Lays Only as Well as She Feels DR. HESS PANAMIN

Keeps hens in laying trim. The average hen lays 18 to 20 more eggs when Panamin is added to the ration.

1 lb. 65c 7 lb. \$1.25 25 lb. \$3.50

We stock a full line of Hess Veterinary and Poultry Tonics

WARM WEATHER HALTS FLOODING OPERATIONS AT THE CURLING RINK

Curling Ice Now Almost Ready To Put in the Rings

With the turn of the weather about ten days ago, winter set in and the interested curlers and skaters in town were not long in getting organized and to work. Flooding operations on the curling ice were immediately started and there was soon sufficient ice made to put in the rings, when the warm weather arrived this week. However, the ice made is holding up well and as soon as a cold wave hits this part of the country the making of ice will be completed and the curling game will be under way.

It is hoped that there will be a club of 48 players this year, giving 12 rings to play for competition. If there are any players who would like to join in this winter's sport they are asked to communicate with the secretary.

The skating rink has also been flooded during the past week and some ice has been made. With about a week of cold weather there should be skating in Carbon. There is a number of volunteers in the well for flooding purposes and Bob Rogers says he will not lose any time when the weather turns cold.

STOCK GRAZING IN SOUTH-EAST ALBERTA

The period of reduction in rentals for certain lands in south-eastern Alberta set aside for the purpose of providing grants to the farmers of 1935 to continue until December 31, 1937, has been extended to December 31, 1939.

While there has been some improvement in late in stock-grazing conditions, Mr. Tanner, Minister of Lands and Mines, stated that it is apparent from investigations made that lands which have been set aside are still unable to satisfactorily maintain the amount of stock per acre required by the regulations.

The original rental rate, inclusive of taxation, was 4 cents per acre or \$6.40 per quarter section. While this rate still continues in more favourable localities, the less favourable ones will continue to be subject to the reduction rates of \$5.20, \$4.20 or \$3.20 per quarter section according to location.

In a circular letter received this week from the Royal Canadian Mounted Police, it is pointed out that during the Christmas season complaints often come to hand from farmers who have forwarded consignments of turkeys, etc. to firms, in response to press advertising and mail circulars, offering exceptional prices and other inducements. The ultimate result in many instances is that the farmer receives practically nothing. Some firms advise and others have a change of name each year for this seasonal trade. As a protection the farmer is asked to consign his poultry to reliable firms this year.

CHRISTMAS ADVERTISING

It is less than one month until Christmas and already the thrifty shoppers are making their purchases so that there will not be that "last-minute-rush" that often accompanies the Christmas shopping.

In order to reach the buyers merchants must use some medium of advertising and The Carbon Chronicle provides the medium. We will gladly furnish decorative material and help in planning Christmas advertisements and circulars wherever possible.

Every one residing in the district is a potential customer at Christmas time. Plan your Christmas advertising now and get it before the buying public while they are in the purchasing mood.

ALBERTA LIBERAL PARTY TO ATTAIN IDENTITY

The Alberta Liberal executive Saturday announced an executive committee composed of four members from the Liberal party, the Conservative party, the U.F.A. and the People's League who would choose a leader and draw up a platform for the united front to be achieved in the spring.

The decision was made in an answer to a resolution passed Friday by representatives of the Conservative party, the U.F.A. and the People's League who met in Calgary and proposed that the Liberal party be dissolved.

In a letter to J.M. McEachern, who acted as chairman of Friday's conference, the People's League executive pointed out that they believed "the welfare of Alberta requires united action as stated from time to time by the Alberta Liberal leader, E.L. Gray, to establish sane and progressive government."

Co-operation of political parties in which retains its identity under its own leadership is the most effective manner of securing united action, the letter stated.

Co-operation must be effected in each constituency by the local political associations acting in conjunction with the respective party leaders," the Liberal resolution read.

TRANSFORMING FRIENDSHIP (By Rev. W.H. McDonald)

The chief reason why people are not more Christian is not because Jesus is not understood, but because they are afraid of the way of life to which he calls them. Anyone who is trying to be a Christian knows this is very difficult. Our economic system in which we must seek some measure of security is a hindrance to this. Our religion is built up around one who is in life and teaching contradicts our competitive desires.

How selfish can one be and be a Christian? Even when one makes due allowance for the fact that the value of my love to my neighbor depends upon the kind of person I am, the fact remains that I am terribly conscious at times that I must be in opposition to this order of society. It is an order of life that is not organized around the teaching of Jesus Christ.

It is because men understand Christ too well that they shrink from him. Jesus is the enemy of all that is not right in our world. He refuses to be in churches and cathedrals and is let loose into the world. For Christ is a hindrance to His work. We know him, in a lesser sense of the word, too well to be startled and shocked when through the water of Nazareth where he had grown up and where his life was public property, he went out onto unbroken paths and there was a violence in Him which made men challenge Him and themselves. He went and through the water of Nazareth he had grown up and where his life was public property, he went out onto unbroken paths and there was a violence in Him which made men challenge Him and themselves.

CONFINE ROADBUILDING TO SECONDARY PROJECTS

Alberta government road-building machinery and maintenance will be assigned to secondary, market and municipal roads as soon as the province's 1100 miles of arterial highways have been hard surfaced, Hon. W.A. Fallow, Minister of Public Works, said in Edmonton last Friday when speaking before the Alberta Association of Municipal District's annual convention.

The minister told delegates that the government intends to have all arterial highways hard surfaced by the end of 1938 and that 600 miles of that type of road will be ready for permanent surfacing next spring.

OTTAWA—Details of the Dominion government's proposed national unemployment insurance will not be assigned to secondary, market and municipal roads as soon as the province's 1100 miles of arterial highways have been hard surfaced, Hon. W.A. Fallow, Minister of Public Works, said in Edmonton last Friday when speaking before the Alberta Association of Municipal District's annual convention.

TWO CANDIDATES WILL CONTEST BY-ELECTION

Two candidates, a Social Credit Nominee and the choice of a four party union convention, were officially named to contest the Lethbridge provincial by-election on December 2. They are A.J. Burnap, Social Credit, and Peter Campbell, Liberal, and candidate representing the Liberal Conservative, United Farmers of Alberta and the People's League. A. Smeaton, withdrew his candidature on condition that he be a straight fight, which at this time will be interesting in view of the fact that it will be a test of strength between the Social Credit party, which claims ninety per cent backing of the people.

FISH FOR THE ASKING

Six hundred and fifty thousand fish were raised from eggs last year at the Quebec provincial fish hatchery at St. Faustine in the Laurentian Mountains. Next year it is hoped that at over a million baby fish will be reared for the purpose of re-stocking Quebec's small streams. Perch and bass of the eggs is done by hand at about this time of the year. Hatching takes place from March to April and then on until the autumn—again the young fingerlings are nourished in long concrete tanks and after five months of age they are shipped in special containers to the various fish clubs and hatcheries. The cost of \$15 a thousand, or upon request to the publicly owned lakes, a trout can be purchased for \$10.00. The eggs in weight a year. An interesting thing about these freshwater fish is that in the young state they have to be given a frequent salt bath to keep their skins free from disease.

WHAT MAKES THE RAIN?

What is it that moulds the life of man? The weather; What makes some black and others fair? The weather; What makes the Zulus live in trees, the Congo natives dress in leaves, and the Eskimos go in furs and furs? The weather.

The welfare of the people in the prairie provinces depends upon crops. And crops in turn depend upon the weather. The weather is the life of the prairie provinces. What, however, makes the weather, or the rainfall, over the prairie provinces?

The first thing that strikes the layman's mind is the vast magnitude of the atmosphere at work in the atmosphere, and the enormous masses of moist and dry, warm and cold air, moving in a constant state of flux. The first thing that strikes the layman's mind is the vast magnitude of the atmosphere at work in the atmosphere, and the enormous masses of moist and dry, warm and cold air, moving in a constant state of flux.

Mr. Patterson, Dominion Meteorologist, points out that our Western weather system is a growth of 20 hours to the acre—requires Nature to evaporate anything something like 40,000 to 50,000 million tons of water mostly from the ocean, then to raise it to the level of the clouds, to transport it over thousands of miles to our prairies and to deposit it as rain; all forming the world's greatest rain-bearing system, in cases of 20 hours to the acre—requires Nature to evaporate anything something like 40,000 to 50,000 million tons of water mostly from the ocean, then to raise it to the level of the clouds, to transport it over thousands of miles to our prairies and to deposit it as rain; Japan In China

The atrocities committed, not only upon combatants but upon civilians—men and defenceless women and children alike by the Italians in the recent conquest of Ethiopia, and in the present day by the Japanese in an unrelenting war of ruthlessness and horror with the Chinese as their victims, have aroused wide indignation and protest in the civilized countries of the world.

So widespread is this indignation over the atrocities and ferocity of the Japanese onslaught in China that the rank and file of the people in such countries as Great Britain, the United States and Canada are searching their minds for feasible and effective steps which might reasonably be taken to bring to a speedy end the terrors of the Sino-Japanese conflict.

Doubtless if some effective measure could be devised to put a stop to this horrible slaughter of innocents in the Orient, without serious danger of precipitating another widespread world war in which their own countries would almost inevitably be involved, the people of these democratic countries would not be slow in urging their governments to take the necessary steps.

But there is real danger of a general debate if one or two countries should attempt to impose measures which would be really effective in the Far East and it is this knowledge which makes the problem such a difficult one for statesmen to handle. Undoubtedly the Japanese are fully aware of the complexities of the situation from the viewpoint of the democratic Occidentals and are taking full advantage of the situation.

In the meantime, people in this continent are doing what little they can to voice their righteous wrath and indignation by passing resolutions expressive of horror and indignation and by agreeing themselves to impose sanctions in a mild form by way of a boycott of Japanese goods, but the extent to which such measures can have a restraining influence on the conquering Japanese is open to doubt.

While Japan's proclaimed pretext for invasion of Chinese territory is fear of the rise of Communism in a close neighboring country, the real reason is the necessity for finding sources of raw materials and creating markets for rapidly expanding industrialism in a country whose population is growing at the rate of a million a year. In a nutshell, commercial gain is the motive.

But as pointed out by R. T. Barrett in The Fortnightly of London, England, Japan could have achieved these objectives in China without embarking on a militaristic campaign of almost unparalleled ruthlessness if she had attempted to secure concessions through diplomatic channels. Stating that Japan had assumed domination in China by her achievements, Mr. Barrett says that Japan "has many friends in the Republic and could obtain the mineral and railway concessions that she wants if she would abstain from military coercion and work upon the assumption of political equality between the two nations." She could even get, in due time, favorable tariff rates for her goods and be accepted as China's tutor. Her natural advantages in competing for the trade of China would be her natural commercial irresistible, once she had secured Chinese friendship.

Instead of choosing the civilized method of gaining her goal, however, Japan decided to waste what she wastes from the Chinese by barbaric methods and in so doing is earning for herself, not only the ill will of 400,000,000 Chinese with all that that may entail in the years to come, but the aversion of the people of many other countries of the world.

For the time being at least Japan's resort to arms appears to have brought success. She has already acquired control over a large slice of Chinese territory and her materialistic gain to date is probably enough to far outweigh in her mind any losses which may be sustained as a result of boycotts waged against her merchandise in the Occidental countries. The mental attitude which permits the Japanese to make unprovoked war on a neighboring country and in the fashion in which it is being carried out will probably result in the widespread ill will which she is incurring in other parts of the world being regarded as of no account.

But there is another aspect to the indignation which has been aroused by Japanese aggression and methods in China that is at least encouraging and this is aptly pointed out by Barbara Altkman, dramatic critic of the New York Times, who stated in a recent article in that newspaper that "the moral standards of internationalism have been steadily improving. Unprovoked conquest for gain is to-day universally condemned. In spite of prevalent forces of evil we are not living in a period that is spiritually dead. When there are no cries of 'shame,' the time will have come for lamentation."

The Spirit Of Optimism

Having Confidence In Your Town Or City Is Important

In spirit of optimism goes a long way with all of us, says the Guelph Ont. Mercury. To have confidence in the future of the city of your residence, of your Province, and of the nation is of vital importance. There is no room for the joy-killer in business or public life. A nation of pessimists cannot succeed in anything. This is the time to look forward to what shall be, with assurance that the future is largely what we make it, and that spirit will soon be reflected in all industry when it dominates our daily life.

Plants Inmate Stones

In dry sections of Arizona where no rain falls for a year or more at a time, tiny plants grow and thrive on the rocky, sun-parched soil by utilizing the stones, which are surrounded by birds and beasts. Even the colors of the plants vary, always matching the particular type of surrounding rock.

Protect Food In War Time

British House Of Commons Told Of Plans For Safeguarding Food

Oliver Stanley, president of the Board of Trade, told the House of Commons that the government was taking steps to safeguard food and controlling the supply and distribution of foodstuffs in time of war. The foodstuffs which are prepared by the food department of the Board of Trade in consultation and co-operation with representatives of food importers, manufacturers and distributors.

Mirrors coated with chromium and aluminum will catch and reflect starlight in greater quantities than silver ones, according to the discovery of two Cornell University physicists.

During Summer Months, Husky Steel Workers are Supplied with Quantities of Gumdrops and Salt Tablets

The salt is cooling and the gumdrops supply extra energy. During 1943, British railroads carried 48,000,000 passengers more than the preceding year.

British Coal Mining

Parliament To Put Through A Bill To Nationalize The Industry

The British Government has introduced the details of a bill to be submitted to Parliament to nationalize the British coal mining industry.

Under the bill's terms the Government will buy out the present private coal owners for £68,650,000 (\$322,250,000) and all coal in Great Britain will pass into state ownership.

The bill provides for unification of coal royalties on a national basis by the establishment of a new commission, replacing the present coal mines reorganization commission.

Any new coal discoveries automatically will come under the control of the commission, which will attempt to reduce the number of coal undertakings and subject to parliamentary approval, will have the authority to advance compulsory amalgamation schemes.

Machinery is to be set up for the hearing of consumers' complaints. The work of assessing the compensation to be paid to individual coalowners out of the £68,650,000 set aside for the purchase of royalties is expected to take place by July 1, 1942, when ownership will become fully vested in the state.

Coalowners at present number 1,300, but many of their holdings have been worked out.

The coal problem has been outstanding for many years. Under the Baldwin Government the coalowners set £150,000,000 as the price they demanded for their royalties, but they agreed to accept the findings of an arbitration board which was set up. The result was the £68,650,000 figure. There were many protests against the board's findings. Many hereditary fortunes, such as those of the Duke of Hamilton and the Marquess of Bute, are founded on coal holdings, and the Church of England has been receiving £750,000 annually from its royalties.

When You Fall Asleep

Different Parts Of The Brain Go Into Slumber Separately

When you fall asleep, different parts of the brain go into slumber separately, it has been discovered by a group of lights in a closing office building.

The discovery, made with electrical tests, was reported in Science, the Journal of American Scientists. It was made by Dr. Halliwell Davis and P. A. Davis, of Harvard, and A. L. Loomis, Dr. E. N. Harvey and G. Hobart, of the Loomis Laboratory, Tucson, N.Y.

Electroencephalograms—the currents of a few millionths of a volt—were taken from the head were used to test the meaning of sleep. Specialized electrodes placed to the head picked up these currents.

The electrodes showed that some parts of the brain "shut down" for the night's sleep of others. The shut-down was apparent by a drop in the amount of electricity coming from that part of the brain. The flow became irregular and intermittent.

These electrical changes showed up at the top where the would-be sleeper felt the sensation of "dozing." The electrical brain power, when deep sleep came, were all reduced to a trickle of electricity.

As far back as 2800 B.C., Babylonians had maps which were based on land surveys and which were used for purposes of taxation.

Scorpions are born fully developed but wrapped up in their protective envelopes. The mother carefully liberates the young from the membrane.

Georgia, in 1770, passed a law making teaching slaves either to read or write an offense punishable by a fine of \$500 for each offense.

Farm Problems

Urges Closer Cooperation Between The Agricultural Economies Of Canada And U.S.

Closer cooperation between the agricultural economies of Canada and the United States to provide a higher standard of living for farmers of both countries was proposed at Toronto by Norman Armour, United States minister to Canada, spoke at the opening dinner of the Royal Winter Fair.

We devote a good deal of time, both you in Canada and in the United States to discussing the competitive features of our countries' progress in the agricultural world," he said.

"Competitive features, it is true, have developed, although I sometimes doubt their fundamental necessity, but I hope you will agree with me in feeling that despite the current emphasis of competition Canada and the United States have a common heritage in the soil as to suggest closer cooperation for a fuller and richer rural life.

"Much has been done already in both countries to lighten the labor of farm work and to endow it with cultural isolation of the farm family. . . . The current program for the farmer is not so much one of isolation as it is of fitting the farmer into the commercial structure of making the farm pay, thus providing the higher standard of living we have come to regard as essential to the progress of society."

Mr. Armour said it is this farm "business problem" which it is to be hoped the two nations can eventually solve by their common advantage. The problem is not necessarily one of large farms or of small farms, or of any special commodity of crop commodities. It is as complex as life itself and in fact is the life of millions of our people on both sides of the border."

He said the United States now grows more farm products in its history with farm totals increasing 10 per cent in the past five years. Prior to the depression the United States had been the land to the city but now the tide has turned and never before in the United States has there been such a trend to the land.

ALICE STEVENS' RECIPES

TRY THESE TASTY BUT INEXPENSIVE DESSERTS

It health is expensive. In many cases it can be avoided by eating proper foods. There does not need to be expensive foods are required. Often the cheaper foods are higher in food value. Milk is one of the best. Fruits are also valuable and apples among the most important fruits.

Milk is much better than medicines in maintaining healthy bodies. Why not let a good supply of apples and milk be your daily diet? The medicine-cake is not needed because they require chewing. This is the best way to get the most out of the fruit. To have all the digestive juices flowing freely is the secret of good eating.

Milk and fruits should be used freely as the basis of a diet. After the heavier main course of the meal, these desserts can be prepared very quickly and are always popular with the family.

Do you find it difficult to plan the dessert and would you like to try out additional recipes? Try this recipe and write me for another new dessert recipe. It will be sent you without any charge and I think your family will like it.

TASTY DESSERT

1 cup flour
2 tablespoons baking powder
1/2 teaspoon salt
1/2 cup sugar
1 egg
1/2 cup milk
1/2 cup sliced apples
1/2 cup raisins
3 tablespoons butter
1/2 cup brown sugar
Mix the flour, baking powder, salt, sugar, egg and milk. Beat for two minutes. Pour into a shallow pan. Top with apples and sprinkle with raisins. Mix butter, brown sugar and spread on top. Sprinkle with brown sugar. Bake in oven 25 minutes. Serve warm, with plain or whipped cream.

BIRDY APPLE CAKE

2 to 3 apples
1/2 cup butter
1 tablespoon butter
Cinnamon or nutmeg
2 cups sugar
1/2 teaspoon baking powder
1/2 teaspoon shortening
1/2 cup milk
Mix and sift the flour, baking powder, salt, butter and milk. Beat for two minutes. Add the milk, beat and mix. Beat the sugar, baking powder and milk. Beat for two minutes. Sprinkle with sugar and spice. Dot with butter. Bake.

Readers are invited to write to Alice Stevens, c/o Home Cooking and Breadmaking, 1155 Commercial Street, Winnipeg, Manitoba, for more recipes.

And Far Handier Than Older Ways!!!

Here is the most useful pack of tissues ever seen.

This new pack contains 45 sheets of silver white wadded tissue. Through the pack is a metal eyelet for hanging on the wall. Inside, the tissue is held in an ingenious grip so that you can withdraw one sheet at a time, or simply reach out with one hand.

"Presto-Pack" thus becomes the handiest of all kitchen aids. You will wonder how you ever managed without it.

Making Success Of Farming

Requires Knowledge, Diversity Of Knowledge, Thru City Work

The idea that "any fool can farm"—successfully—is in some minds, but it is a tragic myth. The man or woman who hopes to make a success of life in the country districts and on the land must have a greater diversity of knowledge than the person, who makes a success of his or her affairs in urban communities.

Indeed, the person who knows little or nothing about land activities is astonished to discover how resourceful even farm children are in the multitude of things they can do before they are well into their teens.

Certainly, if we are to have an expansion of successful farming in this province, the old idea that "any fool can farm" must be driven from the minds of some in official circles. Halifax Herald.

Dousing A Poet

Author Of Gray's "Elegy" Had A Fire

A fire, happily not very serious, at Peterhouse, Cambridge, recalls a story of the poet Gray. Like David Copperfield's aunt, the author of the "Elegy" had a nervous dread of fire, and when at Peterhouse, finding his room was on the top floor, he rigged up some iron bars (all to be seen) and kept a rope ladder in readiness for emergencies. Discovering this, some of his fellow-colleagues could not let pass such an opportunity for ragging. One night a sudden cry of "Fire! Fire!" caught the poet to sleep hastily and scramble down his ladder to find in a large tub of water placed in readiness by practical jokers. After which it was not surprising that Gray migrated to Pembroke, Manchester Guardian.

These Vegetables Travel

Come Back To Be Sold Where They Were Grown

Writing in the London Spectator, Sir Wilfrid Bruch Thomas notes a curious circumstance connected with a "harmless hamlet" with which he is familiar. The hamlet lies on the edge of Bedfordshire.

When the people of the hamlet want vegetables, they go to the green grocer. The grocer gets his supplies from a semi-wholesaler who lives eight miles away and circulates his heavy twice a week. The wholesaler, in turn, gets his vegetables from Covent Garden, and Covent Garden gets a good many of them from Bedfordshire, just beyond the doorstep of the "harmless hamlet."

Birds Like Old Houses

Birds do not like new houses. There is something about the gleam of their which frightens the birds. Bird houses, set out in the fall, will become sufficiently weathered by spring to suit the feathered tenants. Wrens are especially fussy about avoiding new houses.

The surface temperature of the sun has been estimated at 6,000 degrees Centigrade.

Gold is alloyed with baser metals, but platinum usually is alloyed with a still more precious metal, iridium.

Arctic Patrol

Esquimaux Furnish Much Needed Food To Royal Canadian Mounted Police

A fortunate meeting with a group of Eskimos, well supplied with meat and with most saved an Arctic patrol of the Royal Canadian Mounted Police from southern Labrador last winter, it was revealed in the annual report of the force.

The patrol, a comparatively routine one covered more than 1,000 miles, travelling south from Pond Inlet on the northwest corner of Baffin Island to Pangnirtung on the northeast coast of Melville peninsula and back to Pond Inlet by a more westerly route.

On the first few days of the trip the patrol was met by heavy going for the dog teams and then, came storms which held up progress for two days. Dog feed ran low and the first animals had to be put on short rations.

One dog had to be shot and another, carried on a sled, was broken tracks were noticed but only two animals were seen and the party was unable to find the Eskimos. A successful attempt was made to kill seal for the dogs.

However, after three weeks travelling, when things were looking really bleak, the patrol reached an Eskimo sealing camp on a small island in Foul Bay. Eight Eskimo families were in the camp and they were well supplied with meat so a quantity of seal was purchased for the dogs.

The patrol consisted of Acting Lance Corporal Gray, Special Constable "Kippomee," a guide named "Kippomee" with two dogs. They visited the Eskimo settlements in the district to collect vital statistics and game returns.

Only Recipe For Peace

Loving Your Neighbor As Yourself

Says Sir Evelyn Wrench

The Kellogg-Briand Pact, designed to establish amity among nations, failed because world nations were "further advanced than they actually were," Sir Evelyn Wrench said.

Speaking at the British Speaking Union, said in an address at Toronto, "After 25 years of travelling and seeing the world, I feel the United Kingdom of the Union, 'I have come to realize that the only way to save humanity is to put into effect the simple doctrine of the Founder of Christianity—love thy neighbor."

"During my travels on this great continent I have often passed to think what a wonderful thing it would be if we could find such brains as those that built the great San Francisco bridges and showed Canada's railways through the Rocky Mountains to point out to the world a political intention to join the nations of the world."

Mr. Scheerer asked to sing: "What's your favorite air?" "Prize (making for door): "Fresh and plenty of it."

Oil million pictures are sold from the emulsion on them.

Coal deposits of Alaska are estimated at about 10,000,000,000 tons.

TOWN & COUNTY
Personalographs

A. F. McKibbin returned on Friday
after spending a couple of days in
Edmonton.

Mr. and Mrs. S. F. Torrance spent
the week-end in Calgary and return-
ed Sunday evening.

Mrs. Delzel of Dr. Winton spent the
past week visiting with Mr. and Mrs.
Geo. Crabbick.

Mrs. S. Paxon was a Calgary vi-
sitor on Friday and returned Satur-
day.

Mrs. Dorothy Mortimer, and Irvin
Mortimer have moved into town and
have taken the house recently left
vacant by the Joe Skerry family.

H. C. Willson and daughters, Betty
and Irene, spent Monday in Calgary.

Warm weather has prevailed since
the first of the week. The snow is
settling and the sleighing is good on
most of the country roads. We miss
the jingle of sleigh bells, which are
seldom heard now, although at one
time they were a necessary part of
the harness during the winter months.

THE CHRONICLE

It's just a month until Christmas!
Done any shopping yet?

The Annual Bazaar of the Anglican
Church will be held in the Old Bank
Building at 3 p.m. on Saturday, Novem-
ber 27th, including tea, a rummage
sale, and sale of home cooking.

Irvin Mortimer has his transport
truck on the road again after a delay
last week, caused by fire which de-
stroyed the cargo and van. Fortunately
the chassis was not damaged, quick
work by assistants removing the van,
which was attached by clamps, saving
it. It is thought that the fire origina-
ted from a short circuit in the tail
light.

Mr. and Mrs. C.H. Nash entertain-
ed a number of the Carbon young
people at bridge on Monday night in
honor of Mr. and Mrs. Eddie Sellens.
There were five tables of bridge and
the prize for the evening went to
the couple with the highest score, Mr.
and Mrs. Bruce Ramsay. Following
bridge a very delightful lunch was
served.

HOCKEY MEETING THURSDAY

A meeting of the Carbon Hockey
Club has been called for Thursday
evening at 7:15 in the Municipal
office. It is anticipated that the business
can be completed in time for the show
at 8:30.

Anyone interested in hockey this
coming winter is asked to attend this
meeting tonight (Thursday).

CARD OF THANKS

Mrs. Irwin and family wish to con-
vey their appreciation for the kind-
ness of all friends and for the beau-
tiful floral wreaths and messages of
sympathy received in their recent
bereavement.

Snicklefritz----

He—You should see the new altar
in our church.
She—Lead me to it.

Teacher—Name the seven wonders
of the world.
Johnny: I know only one, and that
was daddy when he was a little boy.

Mrs. Busby: "Wake up, John! There
is a burglar going through your pocket."
John (turning over) "Oh, you two
just fight it out between yourselves."
Client: "I don't like these pictures."

They just don't do me justice."
Photographer: "Say, Lady, you
don't need justice—you need mercy."

"My dear wife, I have taken you
safely over all the rough places in
life, haven't I?"
"Yes, I don't believe you missed
any of them."

Jimmy: Two had about Alfred
wrecking his car last night, especially
with his girl along.
Norman: Did something go wrong
with his car?"

Jimmy: Yes, too much play at the
wheel.

Mistress: You know, I suspect that
my husband has a love affair with his
stenographer.

Maid: Oh, I don't believe it. You
are only saying it to make me jealous.

Passenger: I didn't sleep a wink, the
way this train jerks. Is the engineer
cray?"

Porter: No, boss, he's just teachin'
his wife to drive!

THROUGHOUT Canada, life insurance policy-
holders and beneficiaries should realize the
menace to their own and the national welfare that
lies in extreme and unjust legislation.

These policyholders represent 50 per cent.
of the electors—federal and provincial. Through
the institution of life insurance, they have so pooled
their resources that their collective interest can
withstand attacks that would bring financial dis-
aster to the individual.

Despite war, epidemic, panic and depression,
life insurance has met every policy obligation
promptly and in full.

Despite the financial disturbance of the past
six years, it has distributed and continues to dis-
tribute, to its policyholders and beneficiaries, over
\$500,000 every working day.

Seventy-five per cent. of this money has been,
and continues to be, paid to living policyholders,
the balance to beneficiaries.

Life insurance is the greatest co-operative
business in Canada. No one doubts its strength
and stability. No one questions the prudent and
intelligent direction of its affairs.

It is the guardian of the hard-earned savings
of 3,500,000 men and women in all walks of life.

Today there are forces in Canada that menace
the welfare of these people. These forces would
penalize their savings and impair their investments
through legislation which cancels public and
private debts—regardless of the debtor's ability to
pay—and which tends to destroy the ownership of
public and private property.

The interests of life insurance policyholders
and beneficiaries—as of all other citizens whose
savings are invested in one form or another in
Canada—demand that promises to pay be ob-
served, when the debtor is able to pay; that hard-
earned savings which safeguard the homes and
families of the Dominion be protected from unjust
legislation.
